Hello, I'm Jorre.

I am a Product Development student with a strong interest in sustainable design, repairability and long lifetime products. I work in an iterative and research driven way, combining analytical thinking with hands on prototyping.

I like working where technology, user behaviour and circular systems meet, and I am motivated by projects that make a real difference. Curious, collaborative and driven by impact rather than aesthetics alone.

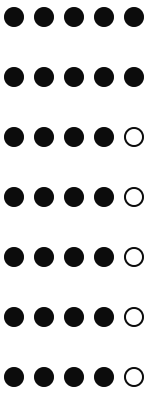

BASED IN
Antwerp, BE

BORN
07.09.2003

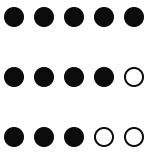

Hard skills

- Service design
- Strategic design
- Technology driven design
- AI and agent development
- Adobe software
- Procreate
- SolidWorks

Languages

- Dutch
- English
- French

Soft skills

- Curious and investigative
- Proactive team player
- Goal oriented and committed
- Creative and solution oriented
- Strong in connection and communication
- Open minded and empathetic

Hobbies

RUNNING

SCOUTING

BOULDERING

MUSIC CONCERTS

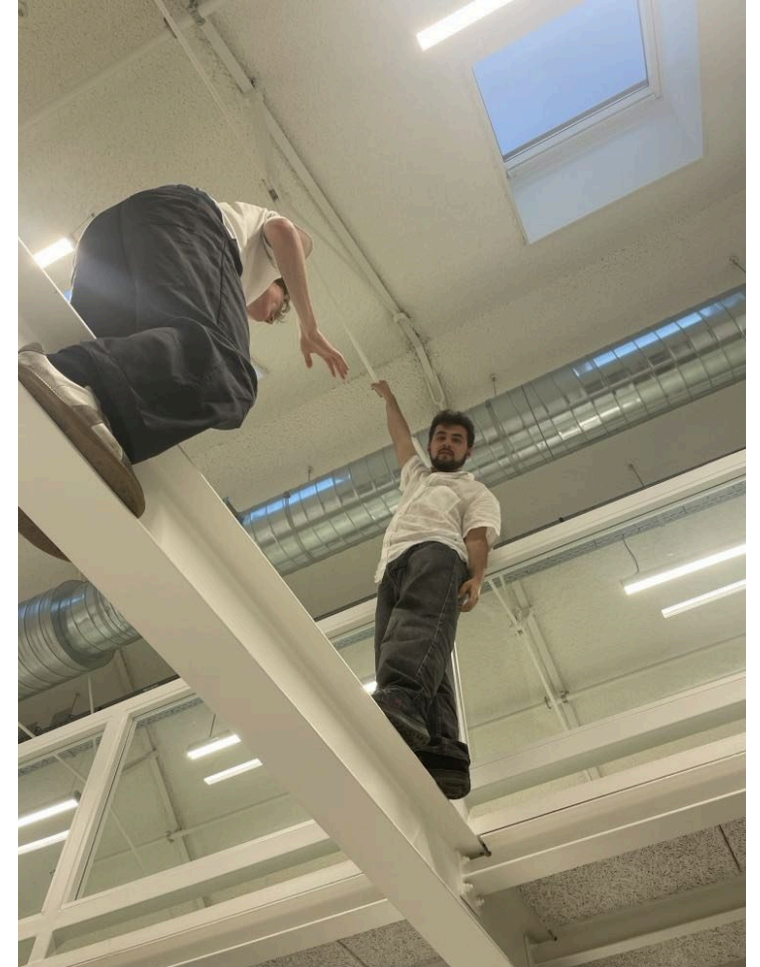

ORGANISING PO EVENTS

Why repair.

I have always struggled with throwing products away, fascinated from an early age by how objects are built and why they fail. That curiosity grew into Product Development and, during my Master, into a clear focus on repairability, longevity and circular design.

I see myself as an iterative researcher with a social and circular conviction. I believe a product service system only matters when there is genuine demand, support and viability for it.

My ambition is simple. I want to help make repairing as self evident in the future as recycling is today.

Education

2024 / now

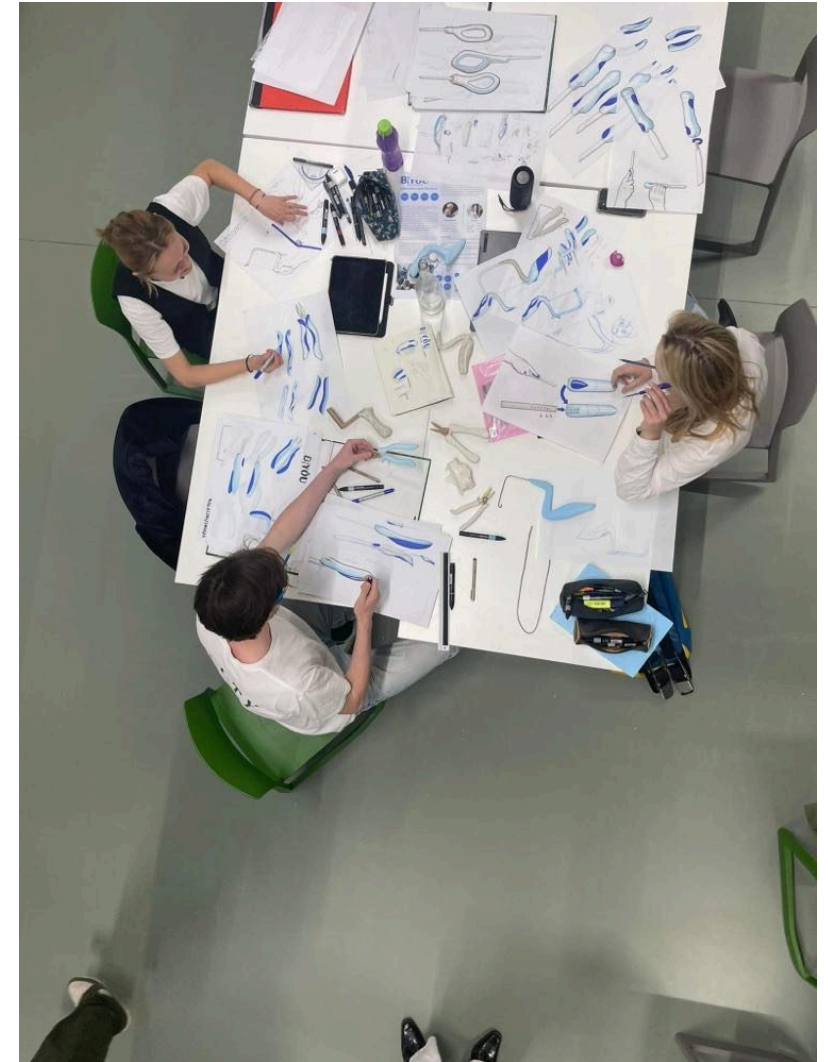

Master, Product Development
University of Antwerp

2021 / 2024

Bachelor, Product Development
University of Antwerp

2015 / 2021

Sports sciences
Berthoutinstituut Klein Seminarie, Mechelen

Experience

2025 / now

Sustainability Ambassador

Green Office, University of Antwerp

2025

Product Development Intern

Pars Pro Toto, Ghent

2023 / 2025

Bartender and server

Het Brughuis, Muizen

2021 / 2025

Youth leader, volunteer

Scouting Frassati, Bonheiden

FIVE PROJECTS

Selected work.

From hand tools to repair systems to a dancefloor.
Each project carries its own colour.

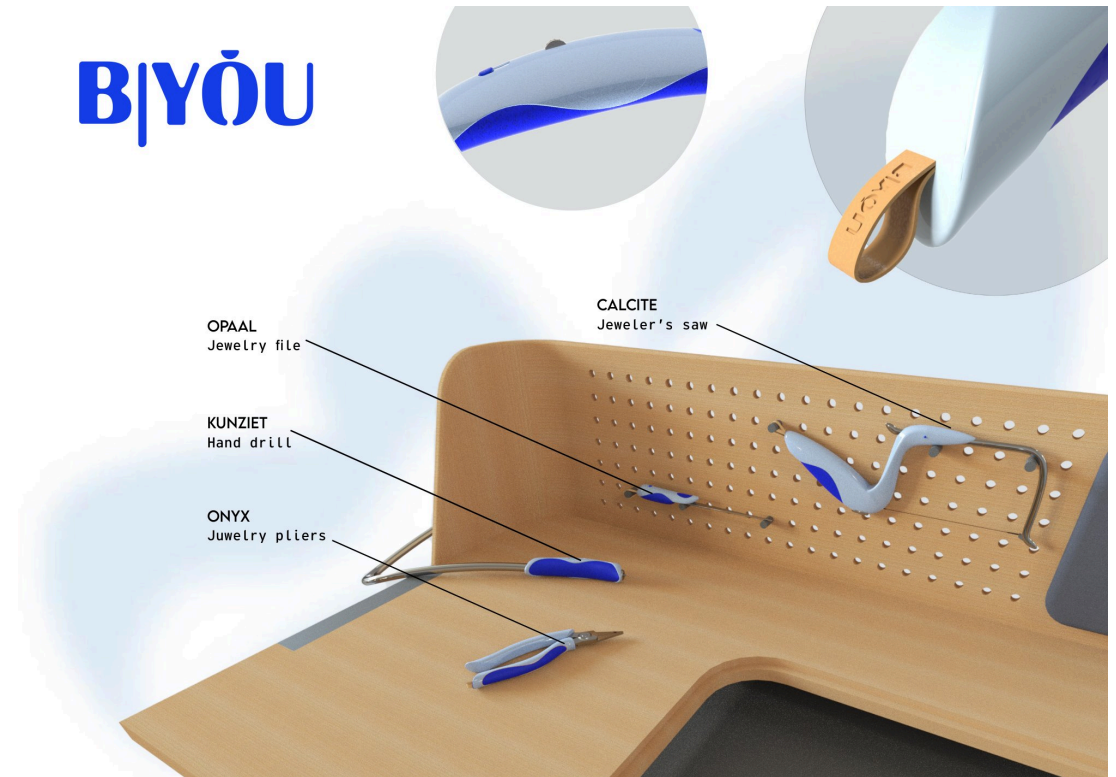

2023 / ERGONOMICS & BRANDING

B|YOU

A jeweler's tool family

A cohesive collection of four ergonomic tools for the hobbyist jeweler, inspired by the dreamy world of creation and built around a fresh, modern blue identity.

jorrevrabout@gmail.com

01 - B|YOU

10

Four specialised tools

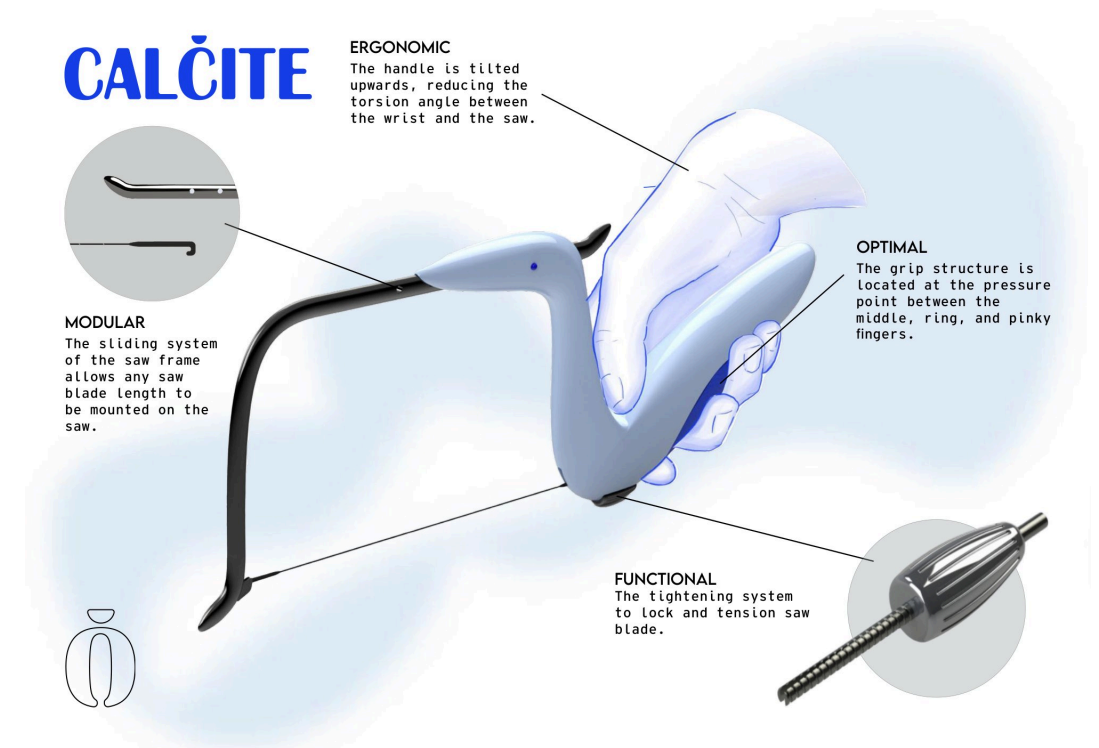

KUNZIET Hand drill, smooth operation and precise depth control.

OPAAL Jeweler's file with seamless grip contours for fluid shaping.

ONYX Ergonomic pliers, strong function with a high control handle.

CALCITE Jeweler's saw that turns creative ideas into flawless actions.

CALCITE tilts the handle upward to reduce wrist strain, grips at the natural pressure points and uses a modular sliding frame with an integrated tensioning mechanism.

2024 / BACHELOR'S THESIS

Biloo

The composting toilet

An off grid, waterless duo compost toilet that improves comfort and sustainability at crowded music festivals. Fully mechanical, with no electronics at all.

Two cabins share one 330 litre sawdust dispenser and a single waste tank. A manual flush releases a precise amount of sawdust through a custom rotor profile to control odor and moisture. A robust AISI 304 stainless steel frame and weather resistant HPL panels handle heavy festival use, and the design can be transported, stacked and placed with standard forklifts, so there is no on site assembly.

2024 / SERVICE & UX DESIGN

AMI

A community for long term patients

A product service system that reconnects long term hospital patients with their support network through personal avatars, social hubs and a simple app.

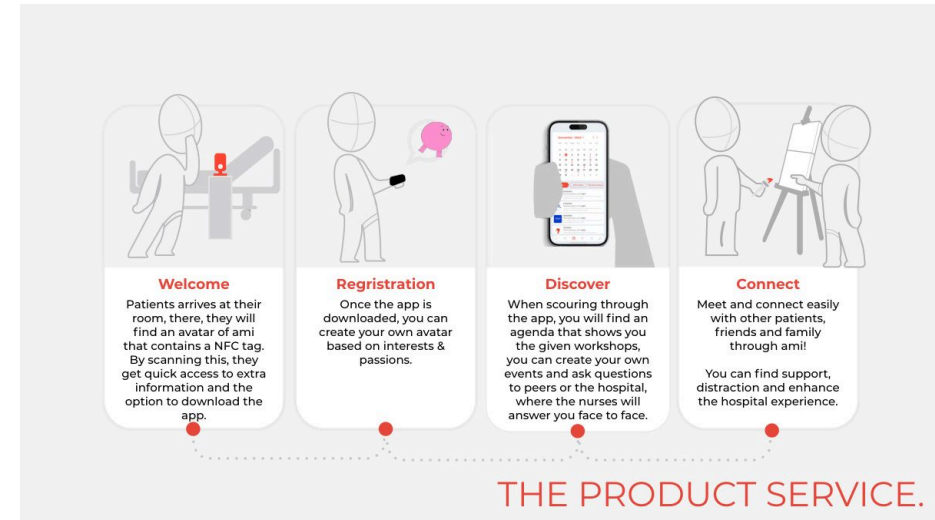

jorrevrabout@gmail.com

Through avatars, appearance becomes secondary and connection thrives. Patients join workshops and events, host their own, ask questions and keep a sense of autonomy through a long recovery.

Discover the Hubs

A dynamic experience for every patient

At the heart of our product service are the Hubs. Dedicated spaces in (& out) the hospital offering a variety of workshops and activities designed to enhance your experience and support the well-being of patients. These hubs are ever-evolving, ensuring there's always something new and exciting to discover. The activities rotate weekly or monthly between hospitals, so no matter how long you stay, you'll always have the chance to try something different.

Whether patients want to explore on their own, invite friends or family to join, or connect with other patients, the hubs are designed to foster connection, creativity and relaxation.

Thanks to ami's partnerships with organizations, hubs are all different and unique. From learning chess with other patients to calming yoga sessions with expert instructors, every workshop/activity can bring joy to patients hospital stay.

So for patients:

"Step into the Hubs, invite your loved ones and enjoy the activities/events-right here in the hospital."

Each hub features a recognizable device of ami that serves as a check-in point. The patient simply needs to let it know they've arrived and their phone will automatically lock to help them fully immerse themselves in the activity. If the patient has an upcoming check-up or appointment, the device will notify them in time. There's no need to stress or worry, no distraction, just 100% focus on enjoying the experience.

THE PHYSICAL PRODUCT.

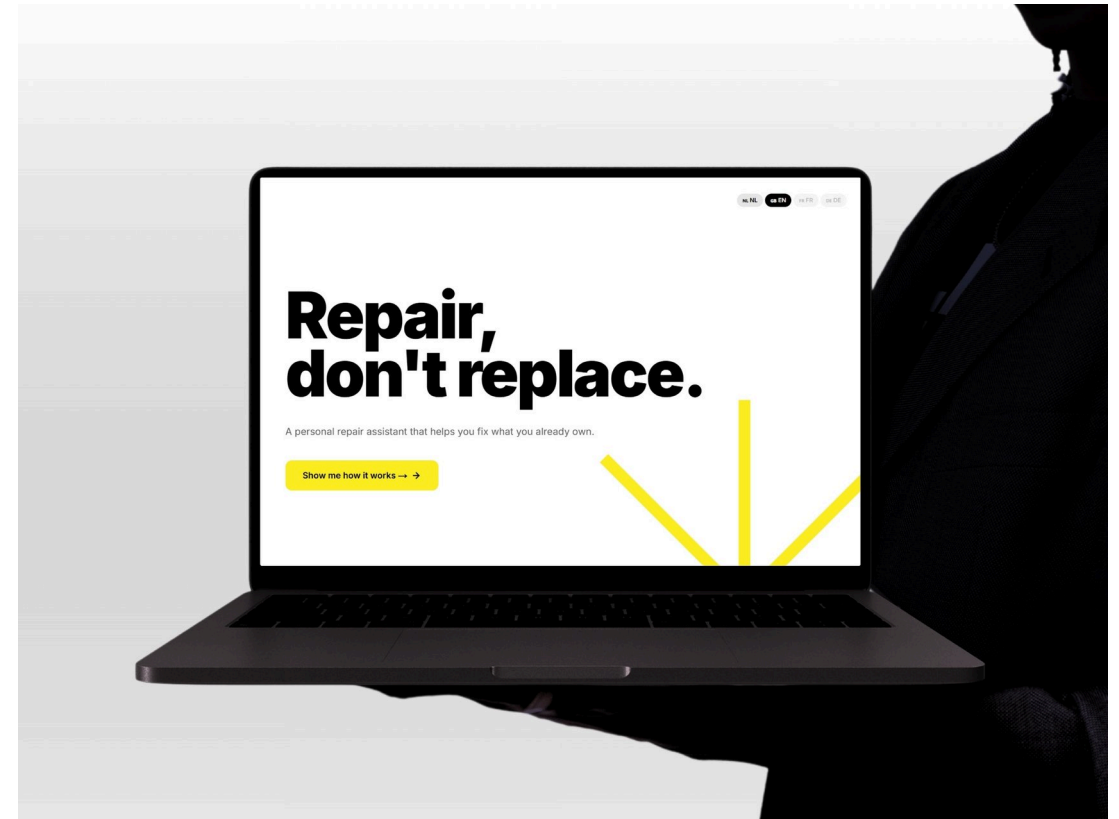

2025 / 2026 — MASTER'S THESIS

Repair Aid

Repair, don't replace.

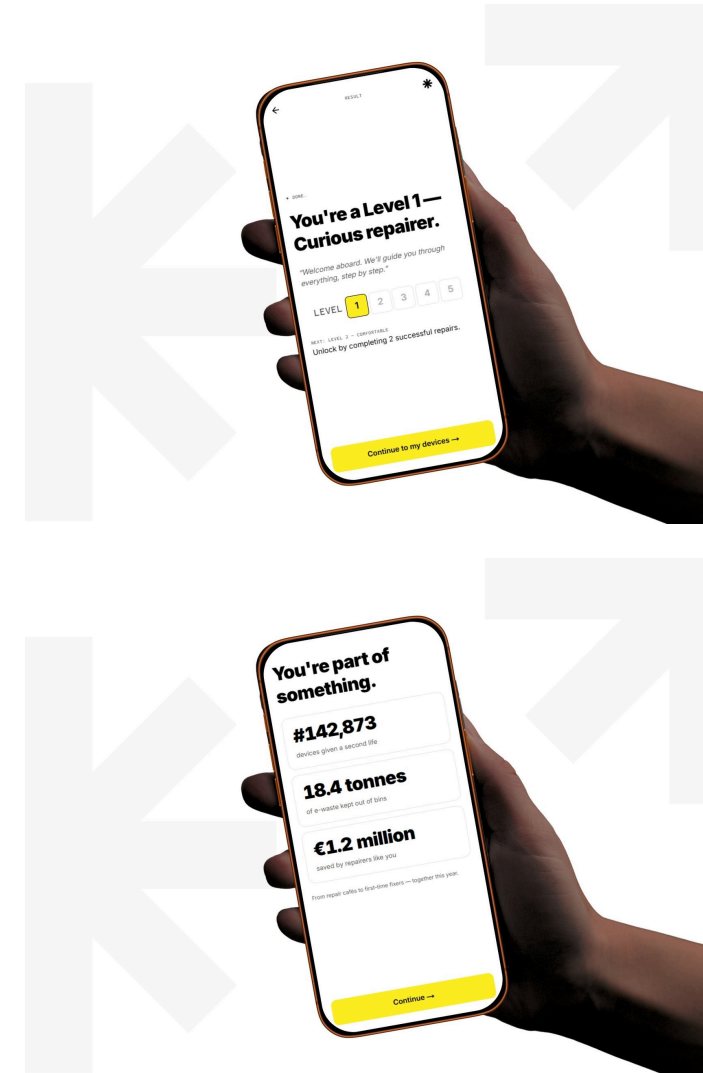

My master's thesis investigating agentic AI in product development. A digital tool that empowers consumers to diagnose and repair their household electronics.

jorrevrambout@gmail.com

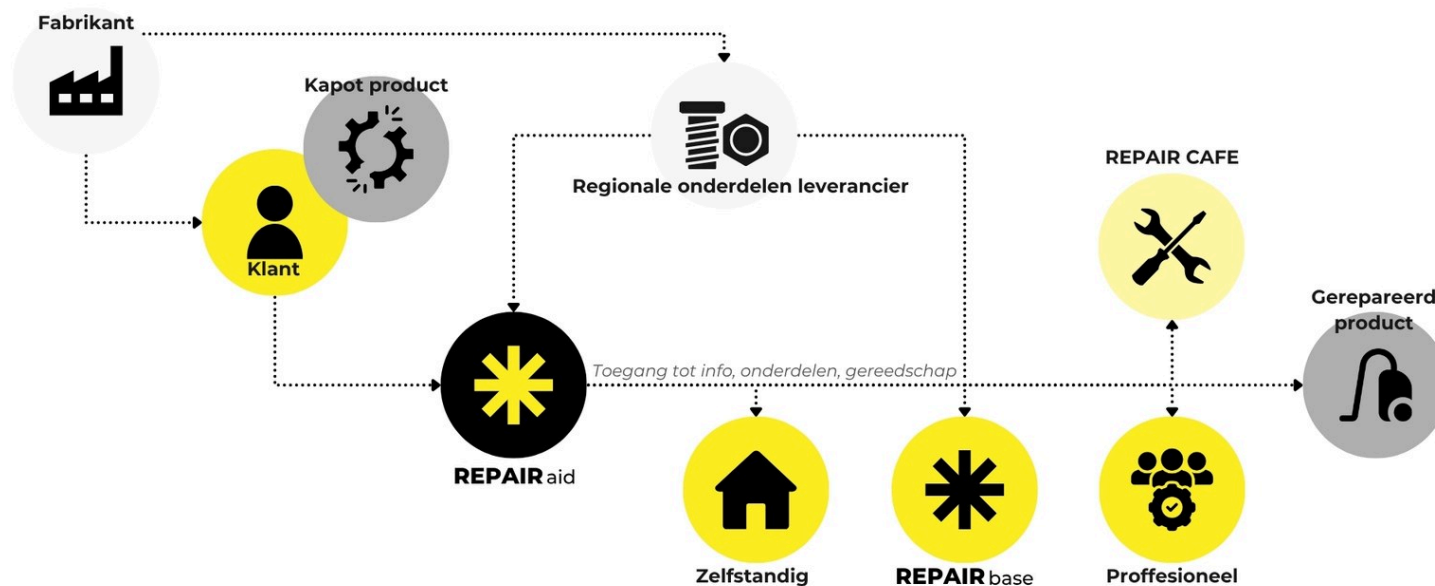

Many devices are thrown away while repair is still possible. The problem is often not the fault but the uncertainty around it. Repair Aid combines historical repair data, user input and agentic AI to guide people step by step from a vague fault to a clear diagnosis and a realistic repair route.

Promotors prof. dr. Jelle Saldien and Philip Van Pelt, Thomas More, within the European E6 ecosystem.

Three routes to a repair

Repair Aid distinguishes independent repair at home, guided repair in a Repair Base and professional repair, then suggests the most feasible option based on the situation, the complexity of the fault and the expected effort.

2026 / SCENOGRAPHY & EVENTS

Firma Funk

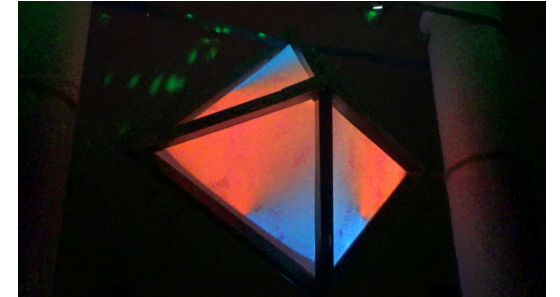

SILO 1, a party that feels like a narrative

An events collective I cofounded with four friends, focused on intimate events that put atmosphere, connection and storytelling before spectacle.

We transformed Bar Ziek, a former hospital site in Antwerp, into a temporary world of vinyl and groove that moved from day into night. Scenography here is more than decoration. It is music, light, space, interaction and the emotional rhythm of a day.

SILO 1 also hosted a wearable haptic prototype that let people with hearing impairments feel the music, showing how events can be more inclusive without losing their artistic value.

THANK YOU

**Let's design
incredible work
together.**
